

Information on the new Prestige A5000

By Michael Douglas

So far this is what I know. The model is A 5000. It has a USB flash drive instead of 3.5 floppy. Unlike previous series all your SU disks will work once transferred to the flash stick. The tab row and preset row have switched places since most players hit presets mostly. The cabinet I'm told this is the finest ever designed by Lowrey. The overall height is slightly lower to bring the music eye level. It has a CD recorder drive. The A5000 has 15 speakers, which Lowrey finally outsourced to a major name brand quality speaker. The sound is unlike any heard on a Lowrey. The touch bars are now pressure sensitive vs. electrostatic so there will be no more issues with them acting up. There are now two intro-ending buttons. So now every rhythm has four intros and four endings - 2 major and 2 minor. There are multiple pages of new category presets. 700 Song set-ups. The screen is much nicer. There's allot more but that's what I know for now. 1/17/2008
